Ben Taylor: ONE YEAR OF PRESIDENT HASSAN

President Hassan at a dinner held in her honour in Washington DC, April 2022 (Ikulu).

As Tanzania saw the first anniversary of Samia Suluhu Hassan becoming President in March, the government and the ruling CCM party celebrated the economic and political changes her presidency has brought about.

Highlights of the year include the President’s championing of women’s rights. Nine of her cabinet ministers are women, which represents 36% of the cabinet, and she has brought a series of highly qualified women in to fill strategically important roles within State House. The government has also reversed the heavily criticised policy of banning pregnant schoolgirls from attending school.

**Business environment and economic diplomacy**

Just days after taking office a year earlier, President Hassan had outlined a raft of measures her government would take to stimulate economic growth, and to recover from the adverse effects of the global Covid-19 pandemic. In her maiden speech to Parliament she articulated

Cover shows Mr Mbowe being welcomed to State House on 4th March 2022 for a meeting with President Samia Suluhu Hassan - see page 6
the need for the government to regain investors’ confidence by creating a friendly business environment.

A year later, CCM Secretary-General Daniel Chongolo said the President’s efforts in this field have resulted in significant improvements in the business and investment environment. “In one year, we have seen a positive economic growth in our country as a result of increased investment in strategic projects: electricity, water, health, education, road construction, railways and airports,” he said.

Mr Chongolo noted that results that could already be seen including an increase in the circulation of cash, an increase in loans to the private sector, a reduction in bank’s bad credit, an increase in foreign currency reserves and increased tax collection to record levels.

Economists described the period as a course correction. Dr Abel Kinyondo of the University of Dar es Salaam said President Hassan was putting economic diplomacy into practice. She has done this, he explained, by undertaking crucial visits and meetings to repair ties with the outside world and influence Tanzania’s trading relationship with the rest of the globe. She has met with key players in the international economy – for example hosting visits by the former British prime minister Tony Blair, World Bank managing director Mari Pangestu and African Development Bank president Akinwumi Adesina, and by undertaking visits to Uganda, Kenya, Rwanda, Burundi, France, Belgium, the UK and the USA.

Prof Haji Semboja of the State University of Zanzibar’s Economics Department commended the President for understanding that Tanzania could not work as an island. “She has been believing in global connectivity and that is why she keeps on redefining policies, laws and policies to cope with this modern world,” he noted.

A second trip to the USA, in mid-April 2022, continued this strategy. President Hassan met with US Vice President Kamala Harris, holding talks that mainly centered on Tanzania’s economic growth. The trip reportedly generated close to a billion dollars in investments from various companies in the US.

“We welcome, of course the attention you are giving to that and the focus of this trip including the focus of investment opportunities in relation to the economy in the area of tourism,” said Vice President
The visit to the USA came exactly 60 years since Tanzania’s founding Father Julius Nyerere visited President John F Kennedy in 1962. In noting the anniversary, President Hassan said that “the United States and Tanzania have enjoyed relations for the last 60 years, my government would like to see the relations grow further and strengthened to greater heights.” She also expressed her government’s appreciation to the US government “for invaluable development assistance and great work the USAID has been doing in Tanzania over the years particularly on the social and economic development.”

Political freedoms

CCM Secretary General Daniel Chongolo also remarked that President Hassan has been committed to stabilising the political environment and bringing national unity through good governance based on the rule of law. He noted that she had met with opposition leaders, listening to their concerns and consulting with them on how best to protect democracy and freedom of expression.

He said during this one year, freedom of expression has improved. This is one of the key principles in promoting and building democracy and the classes of the people in self-government in the implementation of the 2020 election manifesto.

The President herself, speaking in mid-March, signalled further reforms would be forthcoming. She issued a series of directives to a special task force formed to propose reforms that would set the stage for “clean politics” and raising democratic standards. In addition to examining the possible need for constitutional reforms, she asked the task force to make recommendations on how best to handle subsidies to political parties, a general code of conduct for political parties, ending corruption during elections and finding a way to enhance women participation in politics.

“We need concrete recommendations that will be shared with the public so that people can understand where we want to go,” she said.

Dr Phidelis Rutayunga, a political analyst and lawyer based in Dar es Salaam, said President Hassan has showed genuine commitment to improving the political environment in the country. “I saw one quote that said she was ready to pay the cost in the 2025 General Election, but
she is determined to create a level playing ground when it comes to politics,” he said.

“Speaking that way in a country like the United States shows that she is ready to be held responsible not only by politicians and pro-democracy activists in Tanzania but also abroad if there is no implementation,” he added.

Early 2022 saw three moments that signal a clear change of direction on political matters: the release of one opposition leader, Freeman Mbowe [see next article], a visit to another (Tundu Lissu) in his exile in Belgium in February 2022, and a willingness to discuss possible changes to political processes in Tanzania with opposition parties [see article on the Constitution]. The government has also recently ended bans on several newspapers, signalling a positive turn in media freedom.

Opposition leaders, however, see significant room for further changes. Two leading opposition parties – Chadema and NCCR – recently refused to participate in dialogue, arguing that the process made little sense if the government would not accept the need for a new constitution.

Further, beyond formal politics, civil society groups and the media continue to find that the operating environment remains challenging. While significant changes have been made, there remain strong elements within the government that are either unsure of the extent to which civil society and the media should be allowed to operate free from government control, or unwilling to allow this.

**Changes within CCM**

Early April also saw the President, in her role as CCM chairperson, introduce reforms to the CCM party rulebook. “Without building a quality and resilient political party, we will fail to keep up with the changes. So we are forced to make revisions within the party’s constitution to keep pace with the changes,” she explained.

The number of National Executive Council (NEC) and Central Committee (CC) members was slashed from 388 to 154, and 34 to 24, respectively. The party also halved the frequency of its annual internal meetings from the grassroots to national levels in what was said to be a decision meant to increase efficiency, and reduce the number of inactive leaders in various positions.
“We have returned regional secretaries to the National Executive Committee (NEC), who will receive direct instructions from the party organ instead of waiting directives from other committee members,” said the President.

Some of the new revisions to CCM’s constitution reversed changes which were made in 2017 under Magufuli, and were explained as being about improving the party’s efficiency.

University of Dar es Salaam (UDSM) lecturer, Dr Richard Mbunda, said the 2017 reforms were prompted by the austere philosophy of the Fifth Phase government. “Probably, the philosophy has been found to be unsustainable for the party, therefore triggering the new reforms,” he said.

A senior lecturer from the University of Iringa, Dr Stephen Kimondo, said despite references to the reforms as normal, the move to reinstate things dropped in 2017 implies that something was wrong within CCM. “It could be said that the amendments had been influenced by an individual,” he said, rather than what is best for the party.

At the same meeting of the party General Assembly, delegates unanimously voted in favour of the new party Vice Chairperson, Mr Abdulrahman Kinana. He replaces the outgoing Philip Mangula, who opted for retirement at the age of 81, after serving the party for many decades in many roles.

Ben Taylor: MBOWE CHARGES DROPPED

In perhaps the clearest sign yet of President Hassan’s more open approach to governance, early March saw the release of Freeman Mbowe, chairperson of the opposition party Chadema, from prison and charges against him being dropped. He had spent more than eight months behind bars on terrorism charges that critics had described as politically motivated.

In February, the High Court’s Corruption and Economic Crimes Division had found that Mbowe and his three co-accused had a case to answer. However, just over two weeks later prosecutors dropped the case.
Mbowe Charges Dropped

“The Court is informed that the Director of Public Prosecution on behalf of the Republic will not further prosecute Halfan Bwire Hassan, Adam Hassan Kasekwa, Mohammed Abdillahi Ling’wenya and Freeman Aikaeli Mbowe,” reads part of the Nolle Prosequi notice signed on March 4 by Senior State attorney Robert Kidando.

Mere hours after his release, Mr Mbowe was welcomed to State House for a meeting with President Samia Suluhu Hassan [see cover]. Video clips released afterwards by both parties informed the public of their agreement to conduct constructive, trustful, respectful and unification politics for the interest of the country.

Mbowe said later that meeting with President Samia Suluhu Hassan shortly after being freed from remand prison was the opportunity the party had been looking for since the fifth phase government [of Presidents Magufuli and Hassan]. He said Chadema submitted three letters requesting to meet former President Magufuli, but in vain.

“Our meeting focused on building principles that would enable our people to build the nation peacefully, something on which she has really shown political will,” he said. Mr Mbowe added that both sides agreed that there was a need to build understanding and consensus by preaching sustainable justice instead of hangings, planting fake cases and shooting each other.

Mbowe’s release came a few days after a group of senior religious leaders made representations to President Hassan, calling for the appropriate authorities to use their discretion to end the case against Chadema chairman.

“We don’t want to interfere with the rule of law,” said Anglican Church of Tanzania Bishop Jackson Sosthenes, upon submitting the request to the President. “We would therefore like to ask for the government’s wisdom to see how the matter could be dealt with in order to bring more health for broad interests of the nation. Authorities should see how the matter can be concluded,” he said.

Political analyst Kasera Nick Oyoo, writing in The Citizen, described the whole case as a farce. He argued that Mbowe’s time in prison put Tanzania on the list of banana republics. “It still beggars belief that a country that always wishes to mirror itself as the paragon of civility
and conviviality felt it necessary to bring terrorism charges against Mr Mbowe,” he wrote. “For some reason, at some point, someone felt that it was not enough to use police to disperse crowds, or deny Mr Mbowe and his colleagues the right enshrined in the Constitution to assemble and conduct political activities peacefully. The powers that be came up with what they must have thought was a brilliant plan – arrest Mr Mbowe and a few acolytes, and charge them with terrorism.”

However, he argued, the trial became a fiasco after it became apparent that the State had “an embarrassingly feeble case” against him and his co-accused. “It seems prosecution witnesses were hurriedly prepared, the case was incoherent, and even laymen could see that prosecution had no concrete case. Testimonies by prosecution witnesses were a complete farce, and that is putting it mildly.”

“In the process, it was not Mr Mbowe who suffered serious damage,” he concluded. “It is the reputation of the United Republic of Tanzania that was drugged through the mud, and a country’s reputation, as we know, is not easily repaired after being tarnished the way it was.”

**Ben Taylor:** **CONSTITUTION**

**New Constitution briefly back on the table, then off again**

Tanzanians may have to wait a little longer for constitutional changes, as a government-sanctioned task force formally proposed in its preliminary report, published in March, that the process should be postponed until after the 2025 General Election. President Samia Suluhu Hassan said she agreed with the idea of making “gradual improvements” rather than wholesale constitutional changes. “Perhaps a complete rewrite won’t be necessary, only in some areas,” she said. “And even if we do have to rewrite the whole document, much of the necessary amendment work will have already been done,” she added.

Task force chair Rwekaza Mukandala said they felt that there is not enough time to adopt a new Constitution within the current electoral cycle. “The process can start immediately after the election, and our proposals on the ways it can be achieved, when the time is right, will be part of our final report to be delivered at a later date,” he said.
Formation of the task force followed pressure from opposition parties, which began the new year by expressing their determination to press for Constitutional review process to be restarted in 2022.

Chadema vice-chairman Tundu Lissu led these calls, saying 2022 would be the start of a new movement to demand a new constitution. “The current Katiba will not solve our problems with the administrative and political system,” he noted.

Lissu explained that the party’s Central Committee met digitally on December 28, 2021 with the aim of shaping the party’s agenda. He said they evaluated the country’s history since the return of the multi-party political system in 1992 and 30 years after Judge Nyalali’s commission proposed the drafting of a new constitution. “We need a new Constitution now, not in 2025. Otherwise CCM will use this current Constitution to steal the election again just as it has always done since multiparty politics returned to Tanzania,” said Mr Lissu. He pledged to return to Tanzania from exile in the near future, so as to lead the movement in person.

Though most opposition parties agree on the need for a new constitution, they disagree on the order of the process. What should come first: A new Constitution addressing all aspects of the reforms agenda on a long-term basis, or “Tume Huru” (an independent electoral commission) ensuring a level playing field for all parties going into the 2025 poll.

Chadema say the Constitution should come first, as this will give the independent electoral commission true independence. ACT Wazalendo say a newly independent commission before 2025 is the priority, enabling better representation of different viewpoints in parliament, and thus also in the process to draft a new Constitution. “We hope that 2022 will be a year of national reconciliation that will achieve the success of finding an Independent Electoral Commission that will facilitate the achievement of a new Constitution acceptable to all,” said Zitto Kabwe, leader of ACT Wazalendo.

Tanzania started the process of writing a new constitution in 2012, after former President Jakaya Kikwete responded to strong opposition demands by appointing a Constitutional Review Commission (CRC) headed by the highly respected former Prime Minister, Judge Joseph Warioba. The team was tasked to conduct extensive nationwide
consultations on the new constitution.

However, the Draft Constitution tabled by Judge Warioba at the Constituent Assembly (CA) in February 2014 was radically overhauled by CCM MPs, resulting in a Proposed Constitution that lacked the support of opposition parties and many citizens. This prompted a boycott of CA sessions by the major opposition parties. The CA submitted the Proposed Constitution to the government in October 2014. However, the planned referendum to determine whether it should be formally adopted never happened. Upon coming to office in late 2015, President Magufuli showed no interest in reviving the process.

Dr Hildebrand Shayo: BUSINESS & THE ECONOMY

Banks’ lending rates to business, and the effect on economic growth in Tanzania

The issue of banks in Tanzania being advised to reduce loaning interest rates is on the lips of politicians, government officials, the President herself, borrowers and loan seekers, whether small or large, seeking loans to run their businesses. Despite these efforts and calls, interest rates charged by lending institutions remain high, something that in-turn affects the growth of productive economic activities, business especially for SMEs and start-up businesses that offer employment on one hand but also tax base for government revenue. Why are interest rates not declining in Tanzanian market? Is the approach used to reduce rates wrong or inappropriate? Or is there a problem in the financial system and interest rates setting system in Tanzania? These are the issues that need reflection with an economic eye to assess why the situation remains the same despite countless calls to reduce the rates. This assessment described concludes with hints as to why it will be thought-provoking to bring down lending rates and what can be done.

Gain access to loans, interest rates and business lending setting panorama

As clamour to lower lending rates continues, Tanzanian borrowers, small or large should not expert reduced loans interest rates soon, notwithstanding lowered policy instrument rates and regular
government officials’ reminders that include other strict measures issued by the Bank of Tanzania.

The conventional approach stems from the fact that interest is the return for the productive use of principal. Since physical capital is purchased with monetary funds, then, the rate of interest is taken to be the rate of return over capital invested in physical capital assets. Whereas the demand for investable capital draws from investment decisions of the business sector, the supply of capital results from supplies of savings derived from households. Loanable funds are the sums of money supplied and demanded at any time in the money market, where: funds available for lending are inclined by the savings of the people and the additions to the money supply (normally through credit creation by banks), while demand for loanable funds is determined by the need for investment plus desire for hoarding.

Within this theoretical background, although BOT practises different measures such as reducing statutory reserves money (SRM) lowering Repos, lending to banks, and reducing yields for debt instruments, these efforts have not yet translated into effective lowered lending rates as anticipated.

Actual lending rates remain at around 16% by most banks, except one bank that recently announced the reduction of rates for personal loans targeting farmers. This makes it harder for borrowers to access loans, and indeed the cost of finance makes it challenging to make profit.

High rates are good for the banks and their shareholders but damaging to viable economic activities that are vital for county’s economic growth. High banks rates also discourage prospective borrowers from applying loans, as others have opted to borrow from individual private lenders or family members.

Presently, there are some banks which lend up to 21% – four times of the BOT policy rate – while maximum mortgage lending rates in Tanzania is 19%. Digital lenders issuing loans through mobile money services, which are assumed to be cheaper due to lower operating costs, lend at a fixed cost between 11% and 15% of the loan among. This is repaid within a much shorter time period: up to a month. When annualised, rates charged by telecoms are a killer, though many users do not realise on how is expensive the loan through mobile phones can be.
Research on informal lending market finds loans at rates that are higher than mobile lenders or banks, as the cost of funds are ranging from 30% to 50% per month. Here risk of non-payment is the key driver.

The main drivers of high lending rates in Tanzania’s lending market are high operating costs, non-performing loans, and cost of funds. Interest income is the major earning stream for all banks.

Tanzanian banks’ operating costs are related to employee salaries and benefits, which account for an average of 44% of the banking industry operating costs and have been increasing over time. Folks familiar with banking industry supposes that maximum monthly salary of large bank CEO is TSh 60m (around USD $25,000), very roughly equivalent to a profit of a bank branch. Likewise, monthly pay for CEO of other medium and small bank ranges between TSh 15-30m.

The implications of these, is simple that efforts should be directed at improving operation efficiencies aiming at reducing banks operating costs. The key areas of attention are with respect to employees’ salaries and how to improve bank’s productivity.

Another notable cost that is not often taken seriously is the cost of premises and equipment – rent, transport fleet, equipment and utilities – which together constitute another 16% of the banking industry operating costs. In this case, ICT advancement in the country in service provision could bring these costs down somewhat.

As far as non-performing loans (NPLs) are concerned, this has become a major problem for most banks. Factors affecting NPLs comprise global financial crises, credit screening weakness, a decrease in supply of loans partly, and capital enhancement measures. In Tanzania, banks are aiming to comply with the regulator’s benchmark of at most 5% of NPLs. Some banks have gone beyond this figure due to various genuine reasons, including economic uncertainty and instability of the labour market, as well as unethical practices among loan officers. Each of these drivers nonetheless are subject to discussion as each might have its own story.

Cost of funds is another factor that keeps banks’ lending rates high, banks cannot lend money at lower rates than they themselves pay. According to BOT, in Tanzania, the overall interbank cash rates which banks uses to lend each other, up to the period of seven-day ranges
between 4.4% to 4.5% while overnight was at 3.72%. Here, some banks that have good relationship with each other usually outsource expensive funds outside the country when there is liquidity shortage locally and vice versa.

**Regulator's role and financial market dynamism in Tanzania**

In recent years, the BOT has announced various policy measures to ease lending rules which include lowering the statutory minimum reserves requirement, lowering the discount rates as well as providing regulatory flexibility on restructuring of loans. For instance, in 2021, the central bank lowered its benchmark lending rates from 7% to 5% to cushion banks from Covid-19 impact. This together with the policy change aimed at to provide additional space for bank to borrow at a lower cost, hopes to encourage lower rates by banks. To spur liquidity, the regulator correspondingly resolved to lower statutory minimum reserve to 6% from 7% effective June 8, 2021.

Various initiatives as stated in this analysis are now being practiced by various financiers including commercial banks. Initiatives such as cluster marketing where employees of the government established parastatals and corporate establishment are able to enjoy good, lowered lending rates may inspire many to get loans at costs that are low compared to what banks charges, but for how long? These tactics exclude important economic groups such as traders, farmers and businesspeople. And importantly they do not target help at start-ups and SMEs viewed as riskier prospects, though these could benefit from lower rates.

**Policy Implications**

Attempts examined in this article to help deal with high lending rates alone on the other hand will not bear fruits without political will. As such, top government officials, including President Samia Suluhu Hassan on various occasions, have made an appeal to the banks to rethink and consider lowering lending rates telling them that they are part of the wider economy. Likewise other leaders also have from time to time have been calling for banks to reduce lending rate, but this is unworkable in real sense.

The implications of the analysis expressed in this article are that high interest rates signal banking sector inefficiency, and when that occurs it hampers not only financial development but also economic growth and
More than 5000 girls dropout of school every year

Several stakeholders have called for more efforts to close the gap between girls’ and boys’ access to education regardless of many government efforts. This was during the one-day symposium that brought together high school students as a continuation of the Women’s Day celebrations. The event was organized by Tai Tanzania, an NGO, in collaboration with the Girl Effect and The Youth of United Nations Association of Tanzania (YUNA Tanzania).

Director and co-founder of Tai Tanzania Mr Ian Tarimo said the World Bank’s figures show 5,500 girls drop out of school each year because of early pregnancies, indicating that there is a need to step up efforts by the community and not only the government to bridge the gap created between girls and boys.

The Director of Girl Effect Ms Rahma Bajun said that part of the reasons also include cultural practices and lack of support infrastructure. She said that they are looking forward to seeing a more equitable society. *(The Citizen)*

Over 1,000 out of school girls in Tanzania enroll for adult learning

At least 1,200 of the 3,000 girls targeted for enrollment in this year’s academic calendar through the Secondary Education Quality
Improvement Programme (Sequip) have already been enrolled with the Institute of Adult Education.

Institute of Adult Education director Michael Ng’umbi said the Sequip-AEP project aimed at reaching girls between the ages of 13 and 21 who dropped out of secondary education for various reasons including poor living conditions, early marriage and getting pregnant.

He noted that the project aims to reach 12,000 students across the country over a five-year period (2021-2026) of project life under the same institute. *(The Citizen)*

**Leadership academy inaugurated, supported by Communist Party of China**

All is set for upcoming political leaders from countries in southern Africa to start sharpening their skills from March this year, thanks to the inauguration of a newly-constructed Mwalimu Julius Nyerere Leadership School located at Kibaha. The ceremony was graced by President Samia Suluhu Hassan.

The idea was based on the Harare Resolution that involved six political parties from different countries on June 8, 2012, to serve southern Africa in honour of Tanzania’s founding President, Mwalimu Julius Nyerere.

The TSh 100 billion institution was funded by the Communist Party of China (CPC). The involved liberation parties in attendance were ANC (South Africa), Swapo (Namibia), MPLA (Angola), Zanu-PF (Zimbabwe) and Frelimo (Mozambique).

“Establishment of the school is a strategic one that will address a number of issues, including strengthening our youth and our people who will work in our political parties and governments,” said President Hassan. She also said the presence of the academy would also train young people with a modern view of developing their countries from within their liberation parties.

Xi Jinping, the President of China and General Secretary of the Communist Party of China (CPC) Central Committee, sent a congratulatory letter for the inauguration ceremony. He said the school will provide an important platform for the six parties to enhance their governance capacity and better lead their respective countries to achieve
development and benefit their people.

He added that the school is an opportunity to strengthen the exchange of state governance experience with parties in Africa, support each other in pursuing development paths that suit their own national conditions, deepen pragmatic cooperation across the board, promote the building of a high-level community with a shared future between China and Africa, and contribute more to the building of a better world. *(The Citizen; China News Service)*

**Tanzania, World Bank sign TSh 1.5 trillion credit pacts for education and land**

The government and the World Bank have signed two concessional loan agreements worth $650 million (about TSh 1.501 trillion) for the improvement of education and land administration systems. The loans agreements will boost the existing World Bank’s portfolio for national Projects in Tanzania to $6.15 billion.

$500 million will be spent on the ‘Boost Primary Student Learning Project,’ while the remaining amount will go to the Land Tenure Improvement Project (LTIP), according to permanent secretary in the Ministry of Finance and Planning, Mr Emmanuel Tutuba.

World Bank country director Mara Warwick said that the Boost Project would help to directly address constraints in the education sector by making Tanzania primary schools safer, more inclusive and child-friendly.

Over 12 million children in mainland Tanzania were expected to benefit from it. On the other hand, she said, the LTIP would increase tenure security for at least two million land holders, users, and their families. *(The Citizen)*

**New Curricula for nursery, primary, secondary in offing**

New curricula for nursery, primary, secondary and teacher education will start being used from January 2025, the Tanzania Institute of Education (TIE) has affirmed.

TIE Director-General, Dr Aneth Komba stated this yesterday in Dodoma when he made a presentation on the envisaged new curricula while
receiving views from stakeholders during an annual meeting of the heads of education institutions under the Christian Social Services Commission (CSSC).

“We can’t say that the current curricula is inappropriate, but we should look at issues which could be added so that the documents can become relevant to the current 21st century and be beneficial to young people for the next 50 years by making them employable and be able to create their own jobs,” she stated.

Dr Komba said the process to improve the current curricula is expected to take at least three years, where they are now at a stage of collecting views and needs from stakeholders to incorporate in the new document.

Several teachers contributed their views including, English language subject to be taught right from the first year of Primary School, vocational education for Standard Seven leavers, social studies to be taught in secondary schools and increase of pass marks for teachers in joining teacher education. (Daily News)

**National Educational system dialogue kicks off**

Preparations for a national dialogue on reviewing the curricula and education system that will meet the current needs has kicked off, said Minster for Education Science and Technology Prof Adolf Mkenda during the visit of President Samia Suluhu Hassan at the Benjamin Mkapa Secondary school.

This decision was made after the recent suggestion from Religious leaders for the need for a national dialogue on education system which was aired during their meeting with President Hassan at the Dar es Salaam State House last week. The clerics noted that that education system should be reviewed for the sake of producing graduates who will be able to venture on self-employment without waiting for employment from the formal sector. (Daily News)
Tanzania concludes review of Covid response, aims to speed up vaccine rollout

The Ministry of Health in the United Republic of Tanzania, with technical support from WHO and other development partners including UNICEF, USAID, British Council, the Jon Snow Institute (JSI) and US Centers for Disease Control (CDC), has concluded a second review of the country’s response to the Covid-19 pandemic. Since the previous review, conducted in October 2021, Tanzania had intensified immunisation activities, including expansion of outreach sessions and updated the existing National Vaccine Deployment Plan (NVDP).

Vaccine Deployment Manager, Dr Florian Tinuga, said the review was critical to assess the operational capacity of the system for a robust response to the pandemic. “The main purpose was to appraise the functional capacity of the Covid-19 response system at the national and sub-national levels following the introduction of additional vaccines (Sinopharm, Moderna and Pfizer vaccines),” he said. He added that the focus is to assist the country to identify best practices and challenges to further improve the vaccination roll-out.

The WHO focal person for Immunization and Vaccine Development (IVD), Dr William Mwengee reiterated WHO’s commitment to providing needed technical leadership of the Tanzanian response. “Although Tanzania had setbacks at the beginning of her response to COVID-19 pandemic, WHO will continue to provide needed technical leadership of the overall response to ensure that Tanzanians in Mainland and Zanzibar are largely protected from Covid-19 infections,” he said.

Best practices identified include intensified outreach services in Ruvuma region, characterised by the use of contextualised local slogans “Timua vumbi” that have enabled Ruvuma to reach the highest Covid-19 coverage of 12%, more than double the national average of 4%. In Dar es Salaam, the integration of Covid-19 vaccination in routine HIV/AIDS Care and Treatment Clinics with the support of Management and Development for Health (MDH) increased the vaccination rate of People Living with HIV/AIDS from 2,000 to 5,000 per day. Engagement
of vaccine champions in the communities have also helped to address misconceptions, rumours and misinformation.

Vaccination coverage in Tanzania remains significantly lower than the global and regional targets established for countries. At the time of writing (April 12, 2022), the latest official figures are that just under 4 million people in Tanzania have received one or more dose of a Covid-19 vaccine, representing 6.4% of the population. This compares to over 21% in Kenya and 32% in Uganda.

Key challenges responsible for low vaccination rates in Tanzania include delayed introduction the vaccine into the country, and low demand due to misinformation about Covid-19. Qualitative findings also indicate that many Tanzanians are unwilling to receive external Covid-19 vaccine due to uncertainties towards its effectiveness as deaths are still occurring in countries where people are vaccinated.

Going forward, the review highlighted the need for advocacy with high-level political, community and religious leaders and increased access to vaccines. In addition, a mass campaign to scale up vaccination activities with adequate resource mobilisation is needed in the coming months.

Separately, at a joint meeting of the Ministry of Health and development partnership, the WHO has called on development partners and agencies for a renewed commitment to strengthen the country’s effort to urgently interrupt ongoing transmission.

“Tanzania has an impressive routine immunization programme,” said Dr Tigest Ketsela Mengestu, the WHO Country Representative for Tanzania, “so I am confident that if partners and the government work harder together, Tanzania can surprise the world by scaling up Covid-19 vaccination coverage and be on track to achieving the targets”.

The Permanent Secretary of the Ministry of Health, Professor Abel Makubi, reiterated the Tanzanian government’s commitment to scale up Covid-19 vaccination and ensure that her citizens are protected from the pandemic. He noted that Tanzania is still far from the national target of 60% of fully vaccinated population by June 2022. “The country is set to achieve the target but this requires the cooperation and support of the partners and donors”, he added.
Study on Covid-19 patients in Tanzania

The first study in Tanzania to examine the characteristics of Covid-19 patients and the outcomes of their treatment reveals about three-quarters of all patients were under the age of 60. Scientists studied the COVID-19 patients in the early months of the outbreak amid scarcity of data on the pandemic. Results of the study were published in IJID Regions, an official journal of the International Organization for Infectious Diseases (ISID).

Researchers tracked 112 patients at two referral hospitals in Dar es Salaam between April and May 2020. Of these, 93% were hospitalized, while 9 patients (7%) were out-patients.

According to findings of the study on characteristics of COVID-19 patients in Tanzania, the age of the studied patients reflects the number of people infected with the coronavirus in Africa. The average age of all patients was 41 years, while the average age of the patients who lost their lives was 58 years. Six out of 10 patients in the study were men. The average age is similar to that reported in South Africa but slightly lower than that reported in China, Libya, the United States (New York) and Italy in early stages of the pandemic, where the average age was higher, with patients being older compared to Tanzania and South Africa.

Headache was the commonest symptom reported among 55% of patients, followed by fever reported by 49%.

Professor Sayoki Mfinanga, a public health Specialist and researcher from the National Institute of Medical Research (NIMR) is the lead author of the study. He says that the symptoms found among patients during the study are similar to those reported worldwide. But he says, “...symptoms such as shortness of breath, altered consciousness, and neurological signs were significantly associated with mortality in the COVID-19 patients.”

“This is important because it is from Tanzania, the place where data was almost absent and the Covid story was only told by a political narrative,” said Mwidimi Ndosi, Associate Professor of Rheumatology Nursing at Bristol School of Health and Social Welfare in the UK.

“It calls into question all the previous government data and its
interpretation that drove the policy, the implications of which are still affecting Tanzania now.” However, he adds: “This study opens the minds of some people who once believed that this is a disease that affects only the elderly,” says Ndosi.

**Most Tanzanians use traditional medicines**

The acting director of Healthcare Services at the Health Ministry, Dr Caroline Damiani, has said that over 60% of Tanzanians use traditional medicines to treat different diseases before or after trying ordinary health-care centres. Dr Damiani made the remark when opening a training seminar for traditional doctors. The seminar aimed at exchanging experiences among the herbalists and discussing various challenges and strategies of improving the profession of traditional and alternative medicine so that it can continue benefitting Tanzanians.

“Over 60% of Tanzanians, at one time or another, get treated by traditional medicine against various diseases before or after going to our health centres or hospitals providing modern health-care services,” said Dr Damiani. She said the main goal of the seminar was to ensure that traditional medicines were better from the stages of growing, harvesting, manufacturing, preserving to the stage of reaching the consumer so that there should not be side-effects.

According to Dr Damiani, the Health Ministry, through the Traditional and Alternative Health Practice Council, has registered 73 types of traditional medicine, out of which 20 had positive results during the period of fighting against the Covid-19 disease.

For his part, the representative of traditional and alternative medicine doctors, Mr Shaban Omary Shekilindi – who doubles as the Lushoto MP (CCM) – praised the ministry and its traditional and alternative medicine unit, for organising the seminar.

**Tanzania UK Healthcare Diaspora Association (TUHEDA) making post-Covid progress**

*by Dr Gideon Mlawa*

Tanzania UK Healthcare Diaspora Association (TUHEDA) members are continuing to carry out TUHEDA objectives which include collaboration in areas of medical education through knowledge sharing, research
activities, and clinical care. Recently TUHEDA members visited Zanzibar and Tanzania Mainland.

In Zanzibar, Dr Gideon Mlawa, Dr Nasibu Mwande, Tania Leach, and Dr Daniel Leach visited the Ministry of Health, Mnazi Mmoja Hospital (Emergency Medicine department and Diabetes Unit), the State University of Zanzibar (SUZA) Medical College and the Diabetes Association of Zanzibar (DAZ) headquarters. The team also visited Tumbi Hospital in Kibaha and received feedback on simulation training program set up 3 years ago as part of the TUHEDA-TUMBI(TUTU) collaboration.

TUHEDA and friends of TUHEDA were honoured to have an audience with the President of Zanzibar, Dr Hussein Mwinyi. The team had an opportunity to discuss the purpose of their visit as well as to set up the simulation training using high fidelity simulation manikin, nicknamed Rajab. Rajab’s new home will be at the State University of Zanzibar (SUZA) Medical College. In addition, 300 glucose meters will be donated to the Diabetes Association of Zanzibar and Mnazi Mmoja Hospital.

Dr Nasibu Mwande visited Kyela (Mbeya) to meet a community of people with albinism. This was a collaboration between TUHEDA and Kyela FM. Dr Mwande presented them with skincare lotion, sunglasses,
and sun hats.

Dr Gideon Mlawa presented on Medical Management of Pituitary Tumours at the Neurosurgery-Pituitary Conference held at Muhimbili University Hospital (MOI). This is an initiative by TUHEDA team and Neurosurgery team at Muhimbili University Hospital (MOI) collaboration through the exchange of knowledge and skills and shared learning.

James L.Laizer TOURISM & ENVIRONMENTAL CONSERVATION

A new Minister for the Tanzania Tourism Ministry
Announcing her mini-cabinet changes on Thursday 31st March 2022, Tanzanian President Samia Suluhu Hassan appointed Dr Pindi Chana as the new Minister for Natural Resources and Tourism, replacing Dr Damas Ndumbaro who was moved to the Ministry of Constitutional and Legal Affairs.

According to the Citizen, the transfer of Dr Chana to the new role was based on the experience that the former has in diplomacy and law: “Dr Chana is a lawyer and has experience in diplomacy. The management of natural resources and tourism it is about diplomacy, I thought she will fits more here compared to the former docket”, said President Samia.

The appointment of Dr Chana into this influential position represents an additional female in a senior cabinet role, in the challenging tourism ministry, not seen under female leadership since the tenure of Zakia Meghji.

Rhino Rajab dies at the age of 43
One of the oldest rhinos in Tanzania, Faru Rajab, has died at the age 43 in the Serengeti National park. According to the Citizen, the Tanzania National Parks Authority reported that Faru Rajab died from natural causes in what is likely due to old age. Tanapa said in a press statement that Faru Rajab died in March 2022 leaving a line of children, grandchildren and great grandchildren.

The rhino was born in the Ngorongoro Conservation Area in 1979
and was transferred to the Serengeti National Park in 1993, said the statement. According to statistics from the Ministry of Natural Resources and Tourism, Tanzania has about 190 rhinos. Tanzania had 10,000 rhinos in the 1970s and the number declined to 65 in the 1990s and went up again to 161 in 2018 and then to 190 in 2020. The sharp decline in the population of rhinos in recent years is attributed largely to poaching.

Tourism stakeholders rejects cable cars on Mt Kilimanjaro

A proposal to put cable cars on the highest mountain in Africa, Kilimanjaro, has been firmly rejected. According to the Citizen, a total of 558 tourism players in northern Tanzania voted resoundingly against a multi-million-dollar cable car project on Mount Kilimanjaro. However, in a clarification statement, Tanapa stated that the planned cable car project was still in its conceptual stage and that actual execution would require government leadership at various stages as well as stakeholder engagement.

The organisations whose members roundly voted against the proposed project included Tanzania Association of Tour Operators (TATO), Tanzania Tour Guides Association (TTGA), Tanzania Porters’ Organisation (TPO), Tanzania Local Tour Operators (TLTO) and the Mount Kilimanjaro Porters Society (MKPS). The representatives’ reservations regarding the planned project are on the grounds that it is a sacred place with considerable existing conservation, local and overall economic value. Representatives further stated that the likely ecological damage from the proposed project would outweigh the expected benefits.

During the 2022 Kilimanjaro Marathon on the slopes of Mount Kilimanjaro, the Tanzania Prime Minister Mr Majaliwa Kassim Majaliwa made it clear that the project campaigners have a daunting task to convince the government to give the contentious plan a green light. He stated: “I’ve heard discussions about the cable cars to be installed on Mount Kilimanjaro. This majestic mountain has its own splendid glory to the adventurers who scale up to the peak on their feet, we want the natural vegetation to remain intact. Once you start digging the mountain to erect pillars of cable cars, you will obviously destroy the natural vegetation on the mountain”.

24 Tourism & Environmental Conservation
Uncertain Situation Remains Over Ngorongoro Residence

Growing fears of eviction from the Ngorongoro Conservation Area are still the subject of much debate amid a conflict that has lasted for more than two decades. Claims persist that the reserve, a UNESCO World Heritage Site, is on the verge of extinction following an increase in human population and livestock, threatening the welfare of wildlife and sense of natural beauty. In 2017, the human population had reached 98,183, compared to 8,000 when the 8,292 square kilometre conservation area was established by the colonial administration in 1959. In the same period, livestock numbers have increased from 161,000 to 805,556.

Despite these rising numbers, opinion is divided over what to do. Some say a permanent solution would be to evict the residents to protect the reserve for the national interests. Other stakeholders propose a roundtable dialogue in an attempt to reach an agreement without hurting anyone, believing that the removal of the Maasai will erode the status of a globally important heritage site that has long provided a sanctuary for people and wildlife alike.

Late in 2021, President Samia Suluhu Hassan called on officials to diligently handle the conflict so that the rights of the people were not infringed upon. Raising concerns over growing human and livestock populations, yet aware of the cultural importance of the site, she said: “I know we agreed to accommodate some pastoralists and animals in the area, but the growing numbers are not acceptable. Otherwise, we need to agree as a nation whether to preserve Ngorongoro or remove it from the list of heritage areas.”

In the same period, the then minister for Natural Resources and Tourism, Dr Damas Ndumbaro, took a harder line, suggesting plans to introduce a Bill in the National Assembly to change the law that established the reserve.

As discussions around the potential relocation of Maasai communities became increasingly heated, the residents of Ngorongoro frequently complained and directed petitions to President Hassan to reconsider the conflict between the Maasai and the conservationists. Many Maasai have sought to emphasis there is a middle way, with Maasai communities having a strong conservation legacy that predates colonial times.
The Citizen reported a resident stating: “We do not refuse to preserve this area, we know its importance for the nation, but the politics that have been clearly visible in this regard are the ones that are destructive and need to be looked at carefully.”

The issue has attracted lawmakers’ attention. Some legislators have been arguing over the removal, reduction of people and livestock within the reserve, while others argue that livestock is owned by a few rich people while leaving a majority poor and without. Subsequently, Prime Minister Kassim Majaliwa has promised that the government will launch a dialogue with the people of Ngorongoro Division as well as those of Loliondo to find a solution based on human rights.

Ben Taylor: AGRICULTURE

Agricultural Transformation Agenda Launched
On April 4, 2022, President Samia Suluhu Hassan launched an “agricultural transformation agenda”, detailing a range of measures to improve agricultural productivity. Under the heading “Agenda 10/30”, these measures aim to produce a 10% annual growth rate for the sector by 2030, up from 2% at present. The slogan “Kilimo ni Biashara” (Agriculture is Business) has been prominently used.

First among the new measures is the government’s desire to see commercial banks lower their interest rates when lending to the sector. The President urged banks to provide a single digit interest rate on loans to the agriculture sector. She said this was of paramount importance in shaping the agriculture sector and increasing its contribution to the economy.

“CRDB Bank is already charging a single digit interest rate to nine percent. I am positive NMB Bank, which is currently charging 10 percent, will follow suit. I will be even more happy if you go to eight percent,” said President Hassan.

Tanzania Bankers Association (TBA) chairman Abdulmajid Nsekela, also the Managing Director of CRDB Bank, expressed commercial banks’ commitment to addressing the challenge of access to capital that
farmers were grappling with. He said currently the agriculture sector was accounting for less than 10 percent of the loans portfolio mainly due to lack of collateral.

“Some 14 banks have signed contracts with Tanzania Agricultural Development Bank (TADB) for it to issue guarantees that will enable farmers to access loans,” he noted.

NMB Bank said it was fully supportive of the government’s ambitions to radically transform the national farming sector into a commercially driven modern enterprise, saying the lender was already using its financial muscle to propel the sector’s growth, having injected over TSh 1.3 trillion into the farming economy and its value chain in the past five years.

The President also instructed the Ministry of Agriculture to establish a Revolving Fund for agricultural inputs and agricultural development, using contributions both from internal sources of revenue and from development partners. “At a time when prices for agricultural inputs shoot due to external shocks, the Revolving Fund will be coming in to cushion farmers,” she said.

She directed the Ministry and the President’s Office for Public Service Management to review the Irrigation Commission structure, so that it should have offices in each district. Minister of Agriculture, Mr Hussein Bashe, has set a target of raising arable land under irrigation from 2% at present to 50%, which would see around 10 million hectares under irrigation, up from the current 600,000.

Further, the President announced plans to issue a price stability fund for fertiliser (where prices have risen sharply with rising fuel costs) and to establish a common use facility for packing, sorting and grading of horticultural products.

Scaling up extension services is another of the pillars in “Agenda 10/30”. Tanzania reportedly needs some 21,000 extension officers, though there are currently fewer than 8,000. Plans are in place to raise this figure quickly.

Finally, the government announced plans for the treasury to let off land that it holds but which remains idle, giving this instead to investors for commercial farming.
Financing these ambitions will require considerable budgetary resources. In the 2021-22 budget, the Ministry of Agriculture was allocated TSh 294 bn, of which 77% was for recurrent expenditure, leaving just Tsh 65 bn for development spending.

President Hassan has pledged to raise development spending, and Finance Minister Mwigulu Nchemba has hinted strongly that agriculture will be one of his top spending priorities in the coming 2022-23 budget.

Ben Taylor: ENERGY & MINERALS

Natural Gas processing back on track?
The prospect of a liquified natural gas (LNG) project is back on the rails after stalling for years. Negotiations for its actualisation formally kicked off in January after inking of a crucial agreement.

Minister for Energy, Mr January Makamba, said the project would require an investment of a staggering TSh 70 trillion (USD $30bn).

The Minister was speaking after an agreement was signed between the Tanzania Petroleum Development Corporation (TPDC), on behalf of the Tanzania government, and Baker Botts LLP as a transaction advisor to the government. The signing at Gran Melia Hotel followed two days of talks between the UK-based legal firm and senior government officials.

The minister said it was the scale of the project that led the government to conclude that international expertise was needed, and thus to look for external consultants to lead the discussions. The search commenced through an international tender which, he said, was won by Baker Botts (UK) LLP, who will work in partnership with Tanzanian law firm, Apex Attorneys.

“We hope with this agreement, the road is cleared for realisation of the project,” he told journalists.

Tanzania has an estimated 57 trillion cubic feet (tcf) of natural gas reserves, mostly off shore, in Lindi Region. Of this, 43 tcf are recoverable while 23-25 tcf qualify for commercial exploitation.

According to Makamba, discussions between the government and other
partners are expected to last until the middle of this year. “Thereafter, an agreement will be signed. This will give a timeframe for the implementation of the project and the like”, he said.

Mr Makamba said the government was keen to see the take-off of the project so that the economy can benefit from the huge gas resources. If completed, the massive project would supply liquified gas for the households and for the export market.

A lead partner with Baker Botts (UK) LLP Hamish McArdo said he was optimistic on the swift conclusion of key issues in the project. He said his London-based firm was experienced in upstream oil and gas projects, especially in legal, technical and commercialisation aspects.

The decision to appoint a foreign firm for this work has attracted some criticism from pundits. They noted that other agreements, including that with Barrick Gold were concluded by Tanzanian legal experts, led by former Constitution and Legal Affairs Minister Palamagamba Kabudi.

In response, Mr Makamba explained that what was being sought was not legal advice but rather a consultant in LNG discussions who had the necessary ability and experience.

“If you look at the terms of reference, there are four types of skills needed. They are financial, commercial, technical and legal. This is the expertise that TPDC was looking for in a process that ended yesterday and which started in 2018,” he said.

“Globally, for discussions like this, countries that have never implemented a project like the LNG always look for additional expertise to advise them in the negotiating process. The country has its own position on what it wants to achieve in the project and then the firm supports this,” he said. He added that Tanzania had regulations that compel a foreign company to strike partnerships deals with a local firm, noting that that was why Baker Botts will work in partnership with Apex Attorneys.

The executive director of HakiRasilimali, which strives for indigenous participation in natural resources projects, Ms Racheal Chagonja, said there was no problem with the firm being offered the job. Nevertheless, she stressed the need for transparency in all processes.
“The experience we have had in negotiating mining contracts since 2017 is that they were shrouded in secrecy. Things need to be different as we now negotiate natural gas deals,” she said.

**Kabanga Nickel prospects looking strong**

The Kabanga Nickel Project has secured a $100 million investment from the world’s biggest mining company, BHP, of which it has allocated $10 million to acquire the hydromet tech to ensure that finished Class 1 battery grade nickel, copper and cobalt will be produced in the country. This was according to Kabanga Nickel’s Chief Executive Officer, Chris Showalter, in an extensive interview with The Citizen newspaper.

Globally, demand for nickel is projected to rise sharply in coming years, due to its importance to the battery technology used by electric vehicles.

“We are very pleased BHP decided to invest in Kabanga,” he said. “To recap the investment, an initial $40 million will be invested into Kabanga together with $10 million into Lifezone – the technology company owner of the hydromet refining technology to be applied at the project.”

With an additional $50 million planned, BHP’s share in Kabanga Nickel will reach 17.8%, valuing the project at $658 million. This is the first new investment by BHP in Africa in years. “This investment secures access to a world class nickel sulphide resource and is aligned with BHP’s strategy to capture opportunities in future-facing commodities,” said a BHP spokesperson.

Showalter also explained that Kabanga Nickel had been moving fast since taking over the project in January 2021, working with the government to ensure that they have all the right mining and refining licences and the proper environmental permits, and working with the community to agree their needs, to agree resettlement proposals where necessary and to create the right community initiatives to ensure local people also derive benefits from the project.

Showalter talked up the environmental credentials of the nickel they will produce in Tanzania. “Nickel from Kabanga will be refined using hydrometallurgy, rather than smelting,” he said, “which reduces emissions by around 80 percent. It will also be refined in Tanzania rather than being shipped around the world, reducing emissions further.”
He said this will increase demand for Tanzanian Nickel, because car and battery makers are under pressure to reduce carbon emissions both in their own operations as well as their supply chains. As a result, “they are likely to prefer our nickel than that produced by dirtier methods in places like Russia.”

Asked when the operation would start to produce, Showalter said that they expect mining to commence in 2025. He added that they will be updating the development plans over the next 12-18 months, which will firm up their timeline.

**Renewable Energy Potential**

Assessments of the potential for generating electricity from renewable sources – wind and solar – in Tanzania have concluded that the potential is very high.

According to the World Bank, Tanzania has a solar energy potential greater than that of Spain and wind energy potential greater than that of the US State of California. With such great potential for solar and wind energy resources, Tanzania is naturally appropriate for producing solar and wind energy as a feasible alternative source for modern energy supply from the national grid.

The Ministry of Energy (MoE) in collaboration with Tanzania Electric Supply Company Limited (Tanesco) and Rural Energy Agency (REA) under the support from DANIDA and SIDA conducted wind energy resource assessments. Among other areas with potential, the assessment identified that Makambako in Njombe region and Singida have sufficient wind speed for significant grid-scale electricity generation with an average wind speed of 8.9 m/s to 9.9 m/s.

Solar energy resources with high potential are widespread across the country, but particularly in Dodoma, Singida and Shinyanga regions. High solar energy levels are ranging from 2,800 to 3,500 hours of sunshine per year.

Given the rapidly rising cost of fossil fuels, the rapid fall in the cost of renewable energy and the global urgent need to reduce emissions of carbon dioxide, these opportunities are likely to play a major role in Tanzania’s future power generation strategies.
On February 1, 2022, the Tanzanite Bridge opened to road users. The 1km-long bridge connects Oyster Bay (Kenyatta Road close to Toure Drive) to Dar es Salaam city centre (on Obama Drive formerly Ocean Road) by the Aga Khan Hospital. The bridge’s striking design and construction combines elements of a girder bridge and a cable-stayed bridge to make it lighter.

With four lanes (plus pedestrian sections) and a capacity of 55,000 vehicles per day, the bridge is expected to ease congestion on Ali Hassan Mwinyi Road, which handles at least 42,000 vehicles every day. In particular, it will reduce pressure on the bottleneck point of Selander Bridge, originally constructed across the Msimbazi delta in 1929 and replaced in 1980.

The TSh 256 bn (USD $127m) cost of the bridge has been jointly provided by the Tanzania government (17%) and a loan from the government of South Korea (83%).

The government said the bridge is significant in efforts to address the challenge of traffic congestion in Dar es Salaam. Minister of Works, Transport and Communications, Makame Mbarawa, said the chronic traffic congestion forced the government to come up with plans that
included construction of roads and bridges in order to reduce, if not eliminate, the challenge.

Republic of Korea Ambassador to Tanzania, Kim Sun Pyo, said the project will stand as a symbol of success and cooperation between the two countries.

The bridge makes a bold addition to the skyline of Dar es Salaam, and has drawn praise from many. “Magnificent Tanzanite Bridge amazes city dwellers,” read the headline in the Daily News.

A motorcyclist, Richard Waniga told the same paper that he rode all the way from Kigamboni to witness the opening of the bridge. “I reside in Kigamboni; I just came to see the new bridge across the Indian Ocean... it is attractive, I commend the government for completing this project.”

Media commentator, Maggid Mjengwa, posted on Facebook that he was definitely the first person to cross the new bridge by bicycle.

Writing in The Citizen, commentator Charles Makakala offered praise for the bridge’s design. It is “an iconic structure,” he wrote, and “a work of beauty merging contemporary engineering with superb aesthetics.” He also noted that it is “expected to be popular with tourists too, who may wish to pass through and take memorable photos of their stay in the city.”

Nevertheless, Makakala also questioned the rationale behind the bridge. He argues that the money would have been better spent widening Ali Hassan Mwinyi Road by building a second bridge alongside the existing Selander Bridge – that this would have been considerably cheaper. He adds that a bridge further upstream, connecting Kinondoni Hananasif and East Upanga near Muhimbili National Hospital, would have made more sense. And indeed he questions whether the continuous expansion of Dar es Salaam road networks should be top priority, when improvements to public transport services desperately need investment and when the government is in the process of relocating to Dodoma.

He concludes that we would be wise “to follow the money”. In particular, he notes that the bridge will significantly raise the value and use of land in Msasani.
Agreement signed on Burundi rail link

In January, the governments of Tanzania and Burundi signed an agreement to construct a standard gauge railway between Uvinza in Kigoma to Burundi’s town of Gitega. The 282km line is expected to cost USD $900m. Finance and transport ministers from the two countries signed the deal in Kigoma.

On the part of Tanzania, the project would involve connecting Uvinza-Malagarasi railway section (156km) whereas Burundi would start from Malagarasi to Musongati-Gitega (126km). Finance and Planning Minister Dr Mwigulu Nchemba said the project would lead to opening business opportunities not only between the two countries, but also for other neighbouring nations. He said the two governments have begun to look for sources of funds to finance the project.

Burundian Minister for infrastructures, Works and Settlements, Dr Deogratius Nsanganiyumwami, said the railway will help to transport over three million tonnes of minerals from Burundi and one million tonne of other cargo, a move which would help stimulate industrial growth, agriculture and economy at large.

Commentators applauded the agreement, arguing that the railway will play a major role in integrating markets and increasing trade, not only across Tanzania and Burundi but also beyond, and that this would help to unlock economic potential in these two nations.

Transportation expert, Prof Zacharia Mganilwa of the National Institute of Transport, noted that the agreement would mean that Burundian cargo from/to Dar es Salaam Port would be transported directly to or from the port by railway. “This helps to avoid cargo double handling which increases transport costs, something that goes further to increase prices of goods and services,” he explained. He added that transporting cargo via railway was also cheaper than road, a situation which would also contribute to decreasing transport costs.

Meanwhile, work continues on construction of the standard gauge railway (SGR) connecting Dar es Salaam, Morogoro, Dodoma, Tabora, Mwanza and Kigoma. The government expects a passenger service to begin operating between Dar es Salaam and Morogoro later in 2022. Work is also underway on other sections of the track, along with efforts to improve connectivity between the railway and the port at Dar es Salaam.
War in Ukraine: Why Vladimir Putin couldn’t have trained fighters in Africa

(BBC online - UK) A black and white image which some people falsely claim shows Russian President Vladimir Putin training liberation movements in southern Africa, has been circulating. Extract continues: It has been used by some to justify why African countries should support Russia in the war in Ukraine... The photograph was widely shared online after it was posted in Zimbabwean blogs at the end of 2018. The posts claimed it shows Mr Putin in a Tanzanian military training camp for southern African independence movements in 1973... “Putin stayed in Tanzania training freedom fighters for four years from 1973 to 1977,” the blogs also claim. However, there is no evidence either from Russian or African records of Mr Putin, who was born in 1952, having been to the continent during the 1970s. Mr Putin’s profile on the Kremlin website show that he was studying at the Leningrad State University at the time, and graduated in 1975. Also outside training offered to Mozambican freedom fighters in camps in Tanzania was largely conducted by
Chinese instructors, not Soviet ones... Although the man pictured is thought to be a Soviet official, so far no-one has been able to confirm his actual identity... (15 March 2022)

**Tanzania’s Zanzibar Island Helps Ukrainians Stranded by Russia’s Invasion**

*(VoA news online - USA)*

Extract: Zanzibar’s President Hussein Mwinyi on Monday said they were helping about 900 Ukrainians who were there on vacation when Russia invaded their country ... Authorities said the Ukrainians are not able to safely return home but cannot stay on the Tanzanian island as local media reported they are running out of money. In comments sent to the press, Mwinyi said they have initiated talks with hotel owners on how they can help these people. He said they will help the Ukrainians until their government is ready to come to their assistance... Officials with the Ukrainian Embassy in Kenya said, “Zanzibar is a pretty popular tourism destination for Ukrainian nationals, so it was clear that there would be an issue. We contacted the tour operators who sent the tourists to Zanzibar. We realize that we have about 1,000 people - we got in touch with Zanzibar to see the possible measures and possible ways how the Tanzanian government can cooperate with the Zanzibars to protect our nationals.” ... Zanzibar’s tourism ministry says the country received more than 2,300 Ukrainian tourists and more than 18,000 Russian tourists in 2020... Tanzania ... [has] ordered its few hundred citizens living in Ukraine to leave the country. (1 March 2022)

**International students trapped in Ukraine appeal for urgent evacuation**

*(Guardian online - UK)*

Extract: International students trapped in a Ukrainian town near the Russian border have made desperate appeals for evacuation, as the number thought to be stranded in Sumy has risen to between 1,200 and 1,500, and they are running out of basic supplies... [I]t emerged that 500 foreign students were stuck in the city, including almost 400 Nigerians, three Irish students and pupils from Rwanda, Lebanon and Tanzania... (4 March 2022)

**Landmine-hunting hero rat dies in Cambodia after stellar career**

*(Guardian online - UK)*

Extract: A landmine-hunting rat that was awarded a gold medal for heroism for clearing ordnance from the Cambodian countryside has died. Magawa, a giant African pouch...
rat originally from Tanzania, helped clear mines from about 225,000 square metres of land - the equivalent of 42 football pitches - over the course of his career... Magawa was the first rat to receive a medal from British veterinary charity PDSA in the 77 years of the awards, joining an illustrious band of brave canines, felines - and even a pigeon... (12 January 2022)

9 million children to be vaccinated against polio in Africa

(Washington Post online - USA) Extract: ... The urgent vaccination campaign has started in Malawi where drops of the inoculation are being placed in the mouths of children across the country, including in the capital, Lilongwe, and the country’s largest city, Blantyre. The vaccination campaign will be expanded ... to include the neighbouring countries of Mozambique, Tanzania and Zambia, according to UNICEF which is working with the governments and other partners... In Tanzania, UNICEF has trained more than 2,000 health workers, 5,128 social mobilizers and 538 town criers, and facilitated the procurement of 3,000 vaccine carriers and 360 cold boxes, expected to be delivered in April 2022 for use in the upcoming rounds of campaigns... (22 March 2022)

U.S. will ‘surge’ vaccine support to 11 African countries

(Washington Post online - USA) The initiative aims to protect Americans and the world from new coronavirus variants. Extract continues: The Biden administration will “surge” more that $250 million in coronavirus vaccine assistance to 11 countries in sub-Saharan Africa, including several where the omicron variant was first identified, as it ramps up efforts to help vaccinate the world, according to a document obtained by The Washington Post and confirmed by global health officials... According to a Global VAX initiative “field guide” shared with diplomatic contacts, the United States will prioritize countries in sub-Saharan Africa - starting with Angola, Cote d’Ivoire, Eswatini, Ghana, Lesotho, Nigeria, Senegal, South Africa, Tanzania, Uganda and Zambia -to “receive intensive support” for their vaccination campaigns through in-person staffing, technical assistance and more diplomatic engagement. Those countries have generally vaccinated fewer than 40 percent of their populations against coronavirus, according to the Our World in Data tracking project at the University of Oxford . . . (17
A jaw-some find! Scientists discover the fossilised remains of a new species of ‘crocodile-like beast’ that roamed what is now Tanzania 240 million years ago - and had ‘powerful jaws with knife-like teeth’ (Daily Mail online - UK) Extract: ... Palaeontologists at the University of Birmingham said the beast, or ‘Mambawakale ruhuhu’, would have reached more than 16 feet long. Its newly-assigned name means ‘ancient crocodile from the Ruhuhu Basin’ in Kiswahili, one of the two official languages of the East African region... Stalking ancient Tanzania, M. ruhuhu ‘would have been a very large and pretty terrifying predator,’ Professor Butler said. Walking on all fours and sporting a long tail, he added, this archosaur is ‘one of the largest predators that we know from the Middle Triassic.’ The fossils were first unearthed from the Ruhuhu Basin back in 1963 - just two years after Tanzania (then known as Tanganyika) gained independence from Britain - as part of a joint British Museum (Natural History) - University of London expedition. The type of specimen comprised a 2.5-foot-long skull with a lower jawbone and a largely complete left hand. It was located and recovered with the aid of Tanzanian and Zambian individuals who went unnamed in associated field reports... [l]n using words from Kiswahili - honours ‘the substantial and previously unsung contributions of unnamed Tanzanians to the success of the 1963 expedition.’ ... (10 February 2022)

Tanzania revives stone arch bridge construction for river crossings (New Civil Engineer online- UK) Extract: It is common for residents of the Kigoma region in north west Tanzania to make dangerous crossings of rivers to reach workplaces, schools, hospitals and markets during the rainy season. But for many, such journeys will soon no longer be necessary as a result of a new bridge construction programme. Removing the inherent risks involved in crossing rivers could also bring global benefits. Safe year-round river crossings are being delivered with the construction of 70 stone arch bridges, as part of Belgian development agency Enabel’s Sustainable Agriculture Kigoma Region Project (SAKiRP). [C]o-funded by the Belgian and Tanzanian governments... The aim of the project, launched in 2016, is to upgrade agriculture value chains but it also resulted in a new approach to bridge construction... “One of the interventions in the value chain is to improve the access to markets for smallholder farmers and that’s where the bridges come in,”
Tanzania in the International Media

says Enabel junior expert rural infrastructure Willem van der Voort. In a country where reinforced concrete bridges are the most common form of river crossing, a decision to construct stone arch ones is unconventional. Enabel opted for this bridge type because of experience gained in Congo and Uganda in its previous incarnation as the Belgian Technical Cooperation. Projects in those countries showed that stone arch bridges are cost efficient, allowing for more to be built with available budgets. Tanzania’s stone arch bridge construction programme started in early 2018 and already 44 have been completed. There has been no shortage of expertise among local engineers and craftsmen, thanks to a detailed construction manual compiled by Enabel... (25 February 2022)

Internet blimps are coming to Zanzibar. But can a UK company succeed where Google failed?

(CNN online - USA) Extract: The Tanzanian islands of Zanzibar and Pemba are about to become a test site for a mobile internet network its creators hope will not just revolutionize lives there, but possibly across
sub-Saharan Africa and beyond. Only around 20% of Tanzanians use the internet, according to the World Bank. That’s low, even for sub-Saharan Africa where usage is affected by limited internet coverage and compounded by high data costs and low digital literacy. However, change will soon be written in the sky... UK company World Mobile is launching a hybrid network using aerostats- blimp-like tethered balloons that it says will provide near-blanket coverage across the islands. Two solar-powered, helium-filled balloons will float 300 meters (984 feet) above land and have a broadcast range of around 70km (44 miles) apiece, using 3G and 4G frequencies to deliver their signal... “We get the sharing economy right in Zanzibar, we prove that at scale in Kenya and Tanzania, and then the rest of the world is ours,” [World Mobile CEO Micky Watkins] says. (12 January 2022)

Martin Walsh: REVIEWS

The first of these books starts with an engaging story about Paulina, the ideal, healthy, well-prepared mother-to-be. At this point, I remembered the title of the book and began to feel a sense of foreboding for Paulina, who of course did not survive the birth of her child. Her experience, and that of several others, forms a thread which runs through the book, and is referred to on several more occasions when highlighting reasons why mothers (and babies) might die in childbirth.

It all vividly brings to mind Hilda, the woman who helped in my house when I lived in Tanzania. She was a practical, intelligent woman, efficient and lovely with my kids, and she already had two of her own children. When she became
pregnant, we made sure she went to all her appointments and ate good food, and we looked forward to meeting the new baby. Imagine our shock when we received the news that she had died in childbirth, along with her child. No-one seemed to be able to answer our questions about what had happened, but Documenting Death certainly sheds much light on the complexity of issues which may have contributed to her death.

Documenting Death is a fascinating and often horrifying account of the maternity ward in Mawingu Regional Hospital in Rukwa Region, a remote rural area in the far south-west of Tanzania, famed for its association with witchcraft. Adrienne E. Strong is an anthropologist from the University of Florida who spent twenty months studying the practices and dynamics of the maternity ward, in the process building strong relationships with the main players in the health sector and, due to chronic understaffing, also working on the ward, even delivering babies in the end (“But I don’t know how to deliver a baby!”, she protests. “Well, I’m going to teach you and then you will know!”, replies the nurse firmly.)

The book begins with an overview of maternal mortality and laments the lack of progress in reducing the death rate after numerous interventions. Strong points out that maternal death is a particularly sensitive indicator – most women are not ill when they come to the hospital – which clearly reveals deficiencies in the health system. She describes the hospital, the staff and the way it functions. This leads on to a detailed examination of scarcity – money, medicines and other supplies, and staff, especially nurses, – the impossible demands made on too few nurses with too few supplies which leads to low morale and motivation. She worked with the nurses for a year before starting to interview them, so that they were already familiar with her and this led to rich and frank discussions later. A whole chapter is devoted to stillbirths, a much more common occurrence than maternal mortality, but occurring as a result of many of the same factors.

There is a deep analysis of the documentation, often imposed on maternity wards from the government or the WHO. In theory, the form (partograph) to be filled in for the women should document the entire journey of each woman through the hospital, ensuring that every nurse instantly understands the progress of the birth, particularly at handover times between shifts, and any special medical issues. However, myriad deviations may occur – the nurse is in a hurry and doesn’t fill in the form, or vital information is missing, the form
is misplaced, the right person does not receive the form, the form is altered perhaps in order to cover a mistake, the form disappears without trace, all meaning that the power of this simple tool is repeatedly undermined. There are many complex reasons examined as to why any of these situations may happen, but the end result can often be tragedy.

Poor communication is another factor which repeatedly comes up – for example, audit meetings were held to discuss any problems, particularly deaths, but they were infrequent, the details had often already been forgotten, the documents were unavailable, and so conclusions were often not drawn. In addition, the nurses, at the forefront of the action were not invited to the audit meetings and therefore were neither given the opportunity to contribute their ideas, nor provided with feedback which might improve their work, and by being excluded, they were denied both a voice and the personal affirmation that their opinions, knowledge and experience were of any value, leading in turn to low morale.

Later in the book, Strong steps out of the hospital into the surrounding villages – the chapter is entitled ‘Pregnancy is Poison’ – and tracks the road to maternal death, following the example of another woman, Pieta, and laying bare the complexities of local logic where reproduction is concerned. A range of social and practical issues is described, including women’s experiences of local dispensary service, bridewealth, marriage and decision making, the lack of transport and the dismal quality of village roads.

On the surface, it might appear that nurses are largely to blame for poor health care in Tanzanian hospitals, but this book provides a deep and detailed analysis of the multitude of complex reasons – social, educational, financial, professional, cultural – why things turn out as they do, and the blame must be apportioned to many. “Mawingu itself was a flawed institution, struggling with competing demands and the proliferation of government-imposed bureaucratic guidelines, but it found itself in a much more broadly dysfunctional system, the country’s health care sector as a whole” (p.192), explains Strong. At best, she comments, the care is “good enough to keep most women alive”.

At the end of the book, Strong cries out with grief and frustration for the injustice of those maternal deaths and for the overworked staff: “Sending ever-increasing numbers of women to facilities will do nothing to reduce the numbers of women dying when those facilities are poorly stocked, suffer from supply chain problems originating at the national level, have inadequate funding
mechanisms due to the unequal effects of decentralization, and systematically perpetrate violence against the staff members by keeping them living in poverty, subject to abuse by superiors, denigrated on the basis of their gender, and shut out from crucial information because of poor communication, lack of transparency, and lack of respect. After all, without the supplies and skills, a hospital is just a guesthouse—full of beds and nothing else; as an environment for giving birth, it is, essentially, no better than home” (p. 202). This book is an eye-opener for anyone interested in the most basic of human experiences, childbirth, and I would certainly recommend it to anyone who wonders why development assistance often stalls, or does not produce the desired results. It is open source, freely available on the internet.

Strong’s book about maternal mortality contrasts in style with the second book, *Factors Influencing Child Survival in Tanzania*. Kumiko Sakamoto explains that there is much information about direct causes of child mortality, but she is interested in examining more indirect causes, for example, stemming from social structures and mutual assistance. She took a questionnaire to three different and contrasting villages in Tanzania, in Dodoma and Lindi regions and on Zanzibar, all considered to be areas with high child mortality rates. She presents an analysis of factors influencing child mortality in general and in terms of the different regions, and then turns to the individual villages. The statistical work is documented in detail, and cross-tabulation, correlation analysis, and logistic regression models are used to understand the influencing factors in child survival.

Unfortunately, the findings are not conclusive, and the author struggles to draw meaningful results from the study. Quantitative research is only as good as its questionnaire, and Sakamoto admits there were some deficiencies, for example, several Swahili words were misunderstood, therefore not eliciting the response she was hoping for, and she felt that one of the interviewers may have been biased, producing unreliable results. The questionnaire also didn’t take into account regional differences – it was one size fits all, and the research suffered as a result, for example, I was surprised that under the questions about nutrition, there were none about fish in coastal Lindi nor milk in the pastoralist village. However, the volume includes useful summaries of previous research into child survival and an overview of factors influencing child mortality in Tanzania.

Kate Forrester

*Kate Forrester lived in Tanzania for 15 years, working as a freelance consultant*
chiefly in social development. She carried out research assignments throughout the country, several focusing on the health sector. She now lives in Dorchester, where she is active in community and environmental work.

PORINI – IN THE WILDERNESS. Bill Harvey (edited by Rolf D. Baldus). Privately published in a limited edition signed by the editor, 2022. 270 pp., 53 photos and paintings, 6 maps (hardback). Available from rolfbaldus@t-online.de. £30.00 + £7.00 postage to the UK.

My former colleague Rolf Baldus has edited and self-published this book, which was written by Bill Harvey, the first warden of the Selous Game Reserve. Porini means ‘in the bush’, and the wild place of the book’s title is the Selous, the oldest and until recently largest protected area in Africa.

In 2005, while he was working for the Tanzanian Wildlife Division, Rolf Baldus was contacted by Bill Harvey’s son in Australia. Perry Harvey gave him a manuscript that had been written by his late father, who had worked in southern Tanganyika and the Selous in the 1920s and ’30s. Bill had written down his memories of that time while later being held captive as a Japanese prisoner of war. Perry had edited his father’s notes and records with the help of his wife and daughters, but unfortunately the family had not been successful in getting the manuscript published as a book. Instead, they had themselves produced a dozen copies.

Rolf Baldus was involved with the management of the Selous Game Reserve for many years. He has written a good number of articles about the Selous ecosystem, and edited the book Wild Heart of Africa (2009), a compilation of historical anecdotes and the natural history of the Selous, to which I also contributed. The Harvey family asked him if he could make the manuscript
available to the interested public. All he could do at the time to honour their request was to upload it to his website, www.wildlife-baldus.com.

The Selous Game Reserve was established by the German colonial administration in 1896, making it the first modern protected area in Africa that still exists today. The British colonial government retained it after the First World War and gazetted it officially in 1928. They called it ‘Selous’ in memory of the great hunter and naturalist Frederick Courteney Selous (1851-1917) who was killed in combat at Beho Beho in January 1917. Bill Harvey was the first warden of the Selous Game Reserve and surrounding ecosystem from 1928 until he handed it over to Constantine Ionides in 1938, who was succeeded in turn by Brian Nicholson in 1954. Ionides narrated his life’s adventures in A Hunter’s Story (1965) and Nicholson did the same in his book The Last of Old Africa (2001).

Harvey’s book is not only an important document on the history of Africa’s oldest game reserve, but it is also very entertaining. It is full of adventure and deserves to be preserved in printed form, to keep alive the memory of this naturalist, who describes an otherwise forgotten period in the early history of the reserve.

Baldus has edited the text where necessary but thought it important to retain Harvey’s style and the spirit in which it was written. Harvey worked in colonial times, and this is reflected, for example, in his use of the word ‘native’ in a way which would now be considered politically incorrect. However, it has been left in the text to preserve its authenticity.

Harvey tells us hair-raising stories about his adventures in problem animal control, especially with elephants. He also writes also about the management challenges he and his colleagues were facing. During the Depression in 1931, “staff had been reduced to a mere skeleton”, and he had to devise means to manage the huge area under his charge with meagre resources. Like all wardens he complains about senseless office work and bureaucracy. Only when porini, on anti-poaching and animal control safaris does he find himself truly of use. He names ‘cultivation protection’ as the most difficult part of his job: elephants and hippos being the main problem. In addition, carnivores like crocodiles and lions preyed on the local population. His stories also include tales of witchcraft and the role it played in hunting down maneaters.

Since Harvey’s days, the Selous has undergone many changes, both positive and negative. Ionides and Nicholson expanded it and turned it into one of
Africa’s elephant havens and a jewel of conservation. But during the 1970s and most of the 1980s it was run down by bad management and corruption.

Under the German co-funded Selous Conservation Programme, we were able to stop the elephant massacre, secure the cooperation and participation of communities around the Selous, and get the reserve going again with sustainable finance from controlled hunting and tourism under full Tanzanian management. Our colleagues Gerald Bigurube and Benson Kibonde should be mentioned here as worthy successors of Harvey, Ionides and Nicholson. If one takes the number of elephants as a measurable indicator, these pachyderms recovered during our working years from around 30,000 in the mid-1980s to well over 70,000 when Baldus left at the end of 2005.

Unfortunately, at that time the self-financing system of the reserve was done away with by the wildlife authorities and poaching was once again facilitated. In the years that followed elephant numbers dropped to 13,000 by 2013.

In 2014 UNESCO’s World Heritage Commission listed the Selous as a “World Heritage Site in danger” due to excessive poaching and planned large-scale projects such as mining and dam construction. Despite this, the government of the late President Magufuli commissioned a large hydroelectric dam at Stiegler’s Gorge in the heart of the Selous. Experts fear that this will turn out to be another ‘white elephant’, and that the heart of the Selous along the Rufiji River, with its lakes, wetlands and once abundant wildlife is being destroyed forever. A move by the World Heritage Committee to strike the Selous from the World Heritage Site List was defeated, because Tanzania was able to convince enough like-minded countries to vote against it. This happened despite clear violations of the World Heritage Site principles that the country has committed to, thus setting a bad precedent for the future.

Other infrastructural projects and surveys for minerals are ongoing, and it is apparent that the economic exploitation and fragmentation of the Selous is being officially sanctioned, with little respect for wildlife. Moreover, the Selous has been split into a reserve and a national park – an action that was taken without proper planning or following the usual legal procedures. Most of the new Nyerere National Park is unsuitable for photographic tourism, and it will likely become an additional financial burden for the Tanzania National Parks Authority (TANAPA), while depriving the Tanzania Wildlife Authority (TAWA) of essential income from sustainable hunting tourism.

Bill Harvey’s account of the early days is a good match for all those great
publications in which game wardens of the past tell their exciting stories, such as Miles Turner on his Serengeti years, Bruce Kinloch on his time in Uganda, Kenya and Tanganyika, Michael Bromwich about the National Parks and wildlife management in Rhodesia and Zimbabwe, Iain Ross on Uganda’s Kidepo, and – perhaps the most entertaining of them all – Ian Parker and Stan Bleazard’s *An Impossible Dream* (2001), about Kenya’s last colonial wardens.

These books open up windows onto a bygone era and the lives of the custodians of game who not only achieved much for conservation under the most difficult conditions, but also enjoyed the freedom of the bush and the joy of nearly unlimited hunting as part of their job description. As Ian Parker wrote, “Our Game Department days were great fun, we led lives that, with good reason, were widely envied and, for a while at least, we were indeed the Heaven-born”.

**Ludwig Siege**

*Dr Ludwig Siege is an economist who joined the German Agency for Technical Cooperation (GTZ) in 1980 and worked there in various capacities until his retirement in 2016. His first assignment in Tanzania was in 1983-85. After working in Zambia and Eschborn in Germany, he returned to Tanzania at the end of 1993 to take over the Selous support programme from Rolf Baldus. He left when the programme came to its end in December 2003, and subsequently worked as head of conservation programmes in Madagascar and Ethiopia.*

Also noticed:

Readers familiar with research on Tanzania’s wildlife are most likely to have come across Tom Struhsaker’s work on different species of red colobus, especially the Udzungwa red colobus (*Piliocolobus gordonorum*) and the Zanzibar red colobus (*Piliocolobus kirkii*). Now he’s written a full-length account of his half century in Africa. Here’s the publisher’s overview (from https://store.bookbaby.com/book/i-remember-africa-a-field-biologists-half-century-perspective, with thanks to Guy Norton):

“*I Remember Africa* is a memoir based on the author’s wildlife research and conservation efforts in Africa spanning 56 years (1962-2018). It describes some of the challenges scientists and conservationists faced in the early days of field research on primates and other wildlife in Africa. The stories range...
from the savannas of East Africa to the rain forests of Central and West Africa. The Kibale Forest in Uganda was the author’s home for 18 years (1970-1988) during the reign of vicious dictatorships, genocides, civil wars, and economic collapse. The author describes how he, his colleagues, and students managed to continue with their research and conservation efforts in Uganda, despite these adversities. Their efforts, along with many others, eventually led to the creation of The Makerere University Biological Field Station and The Kibale National Park. The stories relate humorous and uplifting experiences, set in the context of very dark times. The author also describes the behavior of the primates and other creatures he shared the forest with. This memoir tracks some of the many changes that have transpired in Africa over the past half-century.”

Martin Walsh

Ben Taylor: OBITUARIES

Former British High Commissioner to Tanzania, John Sankey, died in November 2021 at the age of 91.

He was appointed to the Most Distinguished Order of Saint Michael and Saint George (CMG) in 1983, while serving as High Commissioner in Tanzania.

Born in 1930 in London, in a Catholic family, John attended Cardinal Vaughan School before winning a scholarship to Peterhouse at Cambridge University, where he studied classics and graduated with first class honours.

He did national service with the Royal Artillery, seeing active service Malaya in 1952, before joining the Colonial Office a year later. In 1961 he was posted to the United Nations in New York, then in 1964 he transferred to the Foreign and Commonwealth Office. He served in Guyana, Singapore, Malta and the Netherlands, before returning to London in 1979 to become the first head of the newly formed Central African Department.

Between 1982 and 1985, John served as British High Commissioner in Tanzania, a posting that overlapped with the handover of power from President Julius Nyerere to President Ali Hassan Mwinyi. While in the role, John fought hard to ensure British aid spending was maintained
despite the political and economic differences between Tanzania and the British Conservative government under Prime Minister Margaret Thatcher – most notably by ensuring the British-funded road from Makambako to Songea was not simply abandoned halfway, as had been proposed.

In 1985, John took up a new post as UK Permanent Representative to the UN in Geneva, his final position before retiring in 1990.

“Retirement” however, for John, merely meant the start of a new career. He took up historical research, having become fascinated by the life and work of Sir Thomas Brock, sculptor of the Queen Victoria Memorial outside Buckingham Palace. He earned a PhD from the University of Leeds, and then published a book, Thomas Brock, Forgotten Sculptor of the Victoria Memorial (2012). In 1990, John was appointed secretary general of the Society of London Art Dealers and later became a director of the Art Loss Register.

In retirement, John was also an active member of the Britain-Tanzania Society, including contributing to the publication of Tanzanian Affairs. He finally stepped down as proof-reader in 2013.

John is survived by his wife of 54 years, Gwen, their four children and eight grandchildren.

Highly respected Tanzanian scientist, Dr Mwele Ntuli Malecela, died in Geneva in February at the age of 58. She had revealed in 2019 that she had been diagnosed with cancer. Dr Mwele was serving as the World Health Organisation’s director of the Department of Neglected Tropical Diseases (NTDs).

Born in 1963, daughter of the future Prime Minister John Malecela, she graduated in Zoology at the University of Dar es Salaam, and went on to join the National Institute for Medical Research (NIMR) in 1987, where she worked at the Amani Centre to conduct research on lymphatic filariasis. Between 1990 and 1995 she pursued further studies in London where she attained a masters and PhD at the London School of Hygiene & Tropical Medicine.

She held numerous leadership roles in Tanzania, including as Director of Research Coordination and Promotion (DRCP) at NIMR from 1998
and then the Director of the Lymphatic Filariasis program from 2000. She further climbed the leadership ladder and in 2010 was appointed NIMR’s Director General – the first woman to hold this prominent position.

In 2016 in this role, she found herself in conflict with President Magufuli. She reported the presence of the Zika virus in Morogoro, at a time when the virus was causing alarm in Brazil and elsewhere. The President fired her immediately, explaining much later that “The imperialists had sent her to announce we have the disease so that tourists would not come to our country. Then they gave her a job [at the WHO].”

Dr Malecela’s unceremonious exit from NIMR was seen by researchers as an attack on science, and it was something talked about each time her name came up. Some also argued that the dispute stemmed from her unsuccessful attempt to become the CCM Presidential candidate in 2015, running against the future President Magufuli.

Shortly after this incident, in 2017, Dr Malecela joined WHO’s Regional Office for Africa as Director in the Office of the Regional Director. 18 months later, she was appointed by WHO Director General, Dr Tedros Adhanom Ghebreyesus, to her defining role as Director of the Department of Control of Neglected Tropical Diseases, based at WHO headquarters in Geneva.

In 2021, she was awarded an honorary degree as Doctor of Science by the Liverpool School of Tropical Medicine. On the occasion, Professor Mark Taylor described Dr Mwele as “a truly inspirational figure in the fight against Neglected Tropical Diseases, and a proud daughter of Tanzania.”

The London School of Hygiene and Tropical Medicine posted a statement, describing Dr Malecela as “an eloquent and passionate speaker, her approach was characterised also by strict adherence to honesty and integrity on behalf of the people and causes in which she believed. She preferred the truth over seeking to please and this earned her widespread respect.”

The statement also spoke of Dr Malecela’s position as an African woman in the predominantly male field of science. “She consistently broke through glass ceilings and remained conscious of the role she
had to play in empowering and mentoring the generations of women who will follow her. Always generous with her time, her energy and her wisdom, she encouraged and inspired younger people from around the world to see science, in the service of global health, as viable and vital avenues for their talents.”

A WHO statement said that “Dr Malecela will be remembered as an inspirational figure, a dedicated leader and a committed listener. She deployed her many qualities in the service of ideals, all of which were firmly rooted in community service and in the intrinsic value of people’s lives. Her death will be felt deeply and personally by many across the globe, and her inspiration, enthusiasm and unstinting engagement will continue to serve as a guide to all those who knew her.”

President Samia Suluhu Hassan called upon Tanzanians to emulate Dr Mwele Malecela’s efforts as demonstrated both within and outside the country. “She is a great role model for public servants and Tanzanians in general as she worked for many years, held various positions and her ability to work found her rising to become one of the Tanzanians who have worked abroad holding high positions,” said the President.

She added that Dr Mwele’s death “has caused a great loss to nation, and surely she was an important and hardworking woman.”
